

The complex requirements that encompass project cargo execution require creative thinking in order to create and implement effective solutions. When there is something that is too high, too wide or too heavy to utilize the standard transportation equipment, our Project Cargo experts use a variety of shipment modes to ensure your freight reaches its destination according to plan.

Our success in Project Cargo work for mining facilities, power generation plants, petrochemical and oil refineries, steel mill construction projects and other areas is based on a global network of dedicated and strategically placed Project Cargo specialists to get the job done, on time and within budget. These people have the necessary experience and capabilities to handle the great logistical challenges that are encountered when dealing within the project execution arena.

Knowledgeable Team Approach

Whether we are moving a single piece of cargo that is heavy-lift or over-dimensional to a several hundred thousand freight ton project that is globally sourced – a Project Cargo management team made up of experienced personnel will be assigned to handle your project cargo requirements. These teams are fully entrenched in the Project Cargo arena, managing imports and exports across all conceivable modes of transport, with efficient and economical solutions.

Single Point Billing

No matter where the origin and destinations are located, the assigned Project Cargo team handling your cargo can provide single source Project Cargo Services billing with complete back up support as required. This enables you to see regular invoices generated from the same location at customized intervals. Despite the lengthy life cycle of the shipment, payment is made to one location only.

Seamless Shipment Processes

As shipments emerge from the manufacturing site to the final destination/jobsite, the Project Cargo teams will provide efficient and economical logistics solutions to meet delivery requirements and remain within budget. Importantly, we place an emphasis on consistent and accurate communication during all legs of the transport to ensure all applicable parties are kept up to date on developments. This includes manufacturers, jobsite/delivery contacts, terminal personnel, and vendors such as ship, barge and truck owners, crane operators and consignees.

Systems and Reporting

With exp.o®, our online track and trace service, you have global visibility to all Project Cargo shipments. We have standard and customized reporting options based on your needs. Transportation freight spend reports are also available in a customized format per customer requirements.

Project Meetings

The Project Cargo Teams will conduct shipment and project kickoff meetings with the customer as well as vendors hired for the transport. These meetings are a formal review of all tasking so that once the product is load ready, all applicable parties are aware of their scope of responsibility.
